

## Draco Landing Gear Reinforcement Kit

The Draco OEM landing gear is weak and insufficient to handle anything much less than a perfect landing. The stress from side-to-side cracks the carbon fiber struts, leading to failure.

Enthusiast and inventor, Brenden McCormick, "Just Plane Crazy", has developed an after-market, easy-to-install retrofit kit that when installed, makes the factory struts almost strong enough to support a '50 Buick! Well almost.

Email Branden for info or to order a kit: [landinggearfix@gmail.com](mailto:landinggearfix@gmail.com)
